SUMMARY

Java Software Development Engineer with 2 years of experience building scalable distributed systems, REST APIs, and identity management platforms. Driven by customer obsession and a bias for action — consistently delivering high-standards engineering at pace. Hands-on across Mobile, Machine Learning, and Gen AI; perpetually curious and self-directed in learning emerging technologies.

EXPERIENCE

Software Development Engineer · ARCON Techsolutions

Jul 2024 – Present

- Owned end-to-end delivery of 30+ production connectors (LDAP, REST API, DB, RDP) handling 50,000+ daily requests for joiner-mover-leaver workflows with zero SLA breaches. (*Java, Spring Boot*)
- Invented the API Automation Tool, eliminating manual connector builds entirely — reducing delivery from 12 days to 3 days and cutting developer dependency by 75% at near-zero added cost. (*Java, REST APIs*)
- Dove deep into query bottlenecks and inter-service latency, diagnosing root causes that drove a 35% throughput improvement across microservices. (*Java, Spring Boot*)
- Raised the bar on observability by architecting Kafka-based centralized logging and alerting, reducing production incidents by 40% and earning trust from ops teams. (*Kafka, ELK*)
- Containerized services and built automated CI/CD pipelines on AWS — accelerating deployment speed by 3×, enabling the team to ship fearlessly and at scale. (*Docker, AWS*)

Software Development Engineer Intern · ARCON Techsolutions

Jan 2024 – Jul 2024

- Took full ownership on-site at City Union Bank, Chennai — independently delivering 5 end-to-end CI applications (joiner, mover, leaver) for 1,000+ enterprise users as a first-year engineer. (*Java, Spring Boot*)
- Delivered 8+ production-grade REST APIs and connector configurations; held to the highest standards on PAM, IAM, Active Directory, and network security. (*Java, LDAP, REST APIs*)
- Diagnosed and resolved critical bugs in live connector bots during active product development, demonstrating backbone to escalate and resolve under pressure. (*Java*)
- Rapidly self-taught connector JSON schemas and CRUD-based enterprise integration workflows, earning trust to contribute to production systems within weeks of joining. (*REST APIs, MySQL*)
- Delivered consistently across 10+ Agile sprints — contributing to code reviews, feature releases, and production deployments with measurable quality and reliability. (*Git, JIRA*)

SKILLS

Languages Java, Python, SQL, C#, JavaScript

Frameworks Spring Boot, REST APIs, Microservices, TensorFlow, React Native, Flutter, .NET

Cloud & DevOps AWS (EC2, S3, Lambda), GCP, Docker, Kubernetes, CI/CD, GitHub Actions

Databases & Tools MySQL, PostgreSQL, Firebase Firestore, Kafka, ELK Stack, Maven, Git

CS Fundamentals Data Structures & Algorithms, OOP, Operating Systems, System Design, Distributed Systems

Soft Skills Customer Obsession, Ownership, Bias for Action, Deliver Results, Earn Trust, Think Big

EDUCATION

B.Tech in Computer Science & Engineering, SRM Institute of Science and Technology

2020 – 2024 · CGPA: 9.14/10

PROJECTS

Connector Automation Tool · Java, Spring Boot, GitLab CI/CD

Mar 2025

- Identified a high-friction manual process and invented a rule engine that auto-generates connector JSON from Postman collections — cutting integration time by 80% with no added tooling cost.
- Designed configurable schema mappings supporting 10+ API formats (LDAP, DB, RDP), scaling the solution broadly across teams without requiring per-format engineering effort.
- Delivered 4× faster connector shipping — a measurable, durable result that reduced bottlenecks for the entire engineering org, not just the immediate team.

BroScience · React Native, Firebase, Gen AI — Live on App Store

Dec 2024

- Conceived and single-handedly shipped a full-stack fitness app to the App Store — owning product design, algorithm engineering, ML integration, and Firebase backend end-to-end.
- Invented a progressive overload algorithm that auto-adapts sets, reps, and weights across 100+ workout templates, delivering a personalized experience at scale.
- Leveraged Claude AI and Cursor to accelerate algorithm design and scaffolding, cutting development time by 40% — embodying frugality and bias for action as a solo builder.

Nirog · Flutter, Firebase, REST APIs — Smart India Hackathon Finalist

Nov 2023

- Built with deep patient-obsession: unified health records across hospital systems via Aarogya number, directly reducing emergency data retrieval time by 60% for real users.
- Engineered secure, real-time backend workflows trusted by 200+ test users across devices — earning validation at national scale (Smart India Hackathon Finalist).

ACHIEVEMENTS

- LeetCode 1800+ rating; solved 700+ DSA problems across LeetCode, Codeforces, and CodeChef.
- Finalist at Smart India Hackathon (SIH); 3rd Place at AGAM Hackathon; active Hacktoberfest contributor.
- International-level medalist at the World Scholar's Cup for public speaking.
